

Software Used in this Lab

In this lab, you will use [MySQL](#). MySQL is a Relational Database Management System (RDBMS) designed to efficiently store, manipulate, and retrieve data.

To complete this lab you will utilize MySQL relational database service available as part of IBM Skills Network Labs (SN Labs) Cloud IDE. SN Labs is a virtual lab environment used in this course.

Database Used in this Lab

The database used in this lab is an internal database. You will be working on a sample HR database. This HR database schema consists of 5 tables called **EMPLOYEES**, **JOB_HISTORY**, **JOBS**, **DEPARTMENTS** and **LOCATIONS**. Each table has a few rows of sample data. The following diagram shows the tables for the HR database:

SAMPLE HR DATABASE TABLES

EMPLOYEES

EMP_ID	F_NAME	L_NAME	SSN	B_DATE	SEX	ADDRESS	JOB_ID	SALARY	MANAGER_ID	DEP_ID
E1001	John	Thomas	123456	1976-01-09	M	5631 Rice, OakPark,IL	100	100000	30001	2
E1002	Alice	James	123457	1972-07-31	F	980 Berry Ln, Elgin,IL	200	80000	30002	5
E1003	Steve	Wells	123458	1980-08-10	M	291 Springs, Gary,IL	300	50000	30002	5

JOB_HISTORY

EMPL_ID	START_DATE	JOBS_ID	DEPT_ID
E1001	2000-01-30	100	2
E1002	2010-08-16	200	5
E1003	2016-08-10	300	5

JOBS

JOB_IDENT	JOB_TITLE	MIN_SALARY	MAX_SALARY
100	Sr. Architect	60000	100000
200	Sr.SoftwareDeveloper	60000	80000
300	Jr.SoftwareDeveloper	40000	60000

DEPARTMENTS

DEPT_ID_DEP	DEP_NAME	MANAGER_ID	LOC_ID
2	Architect Group	30001	L0001
5	Software Development	30002	L0002
7	Design Team	30003	L0003
5	Software	30004	L0004

LOCATIONS

LOCT_ID	DEP_ID_LOC
L0001	2
L0002	5
L0003	7

Objectives

After completing this lab, you will be able to use phpMyAdmin with MySQL to:

- Create a database.
- Create tables using SQL scripts
- Load data into tables

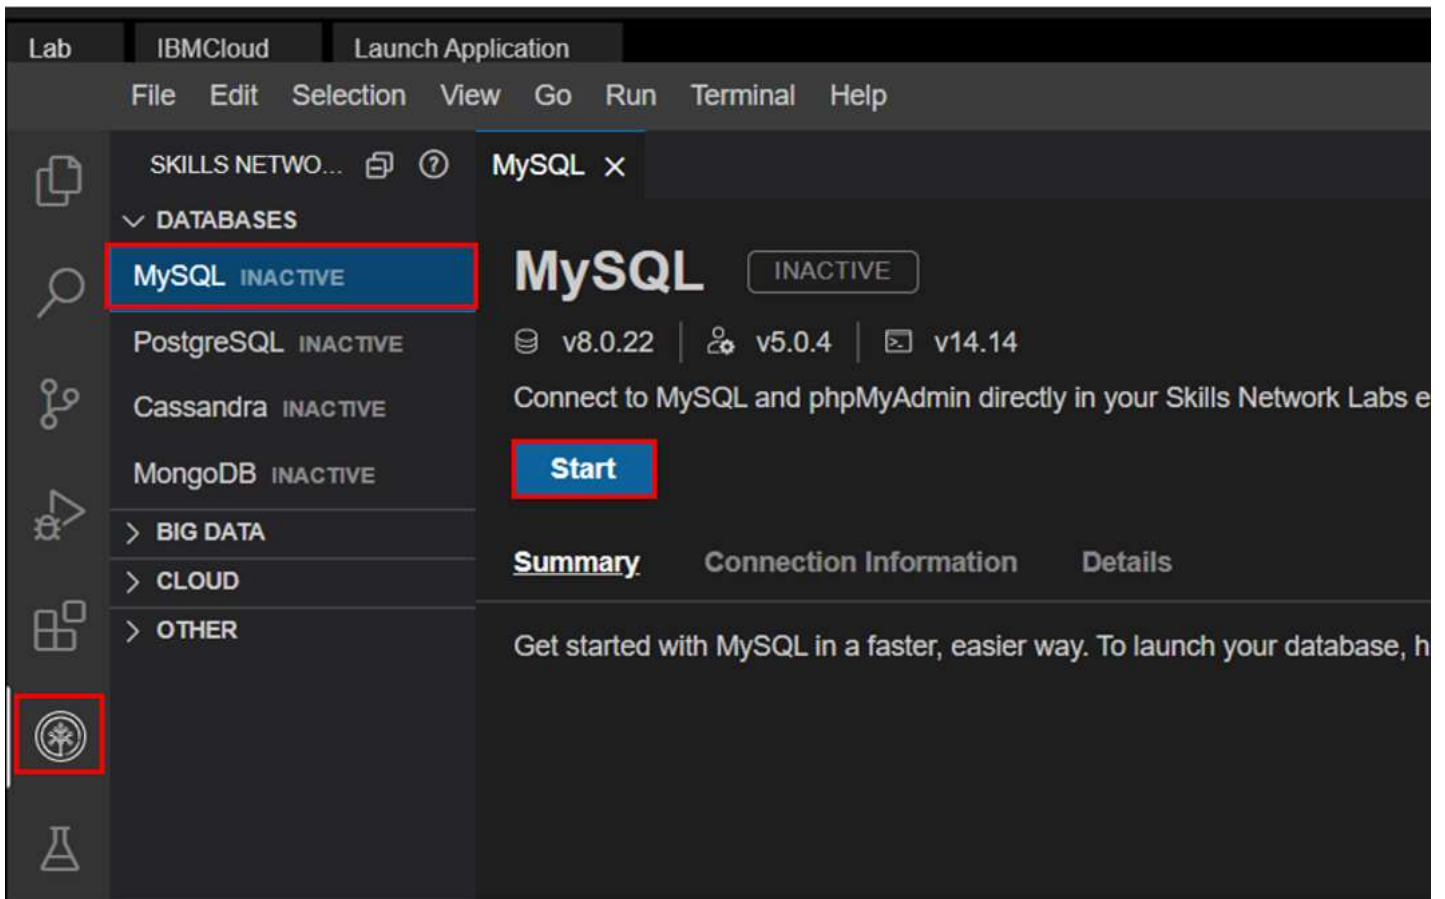

Exercise

In this exercise through different tasks, you will learn how to create tables and load data in the MySQL database service using the phpMyAdmin graphical user interface (GUI) tool.

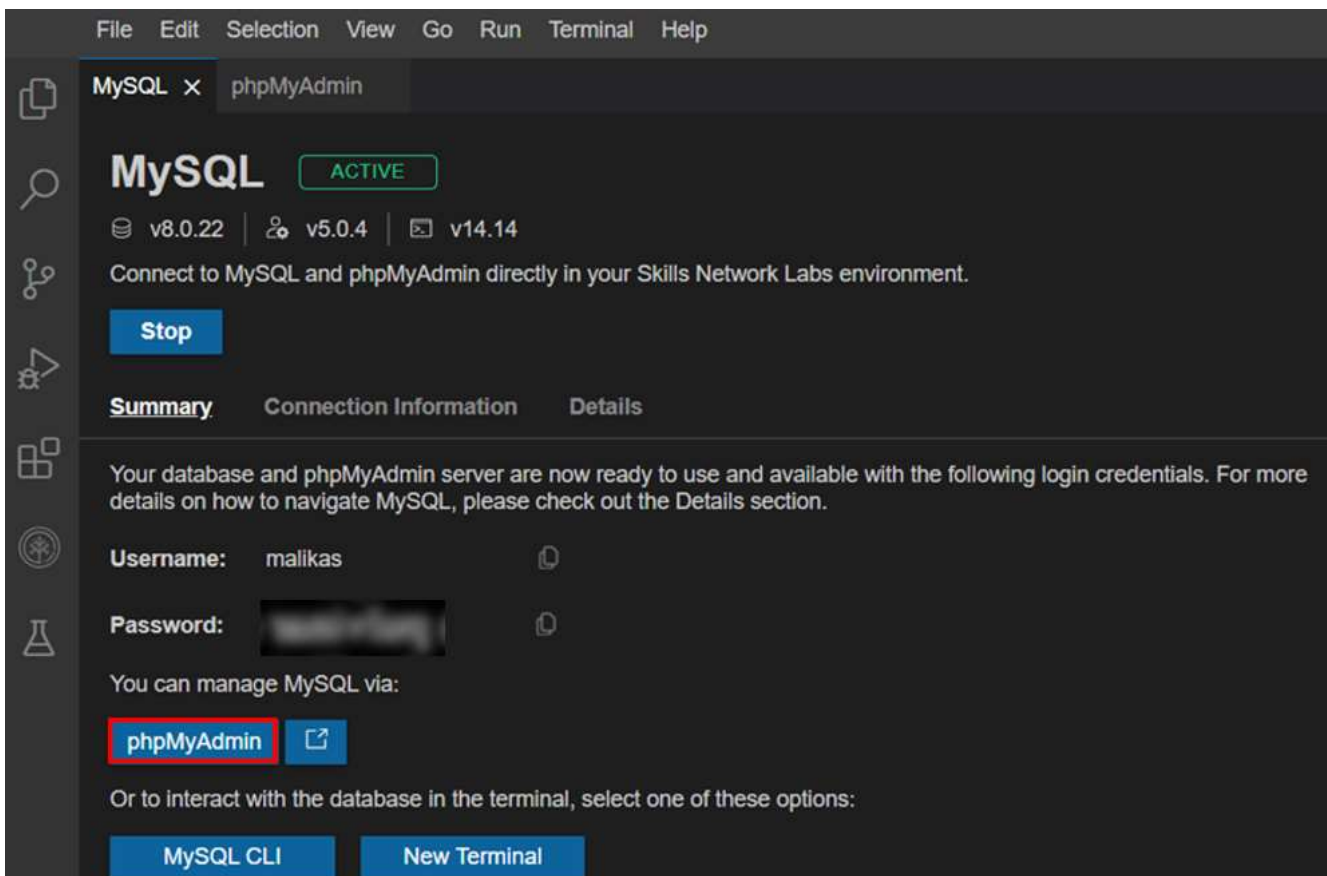

Task A: Create a database

1. Click on **Skills Network Toolbox**. In **Database** section, click **MySQL**.

To start the MySQL click **Start**.

2. Once **MySQL** has started, click on **phpMyAdmin** button to open **phpMyAdmin** in the same window.

3. You will see the phpMyAdmin GUI tool.

Appearance settings

💬 Language ⓘ English

🎨 Theme: pmahomme ▼

4. In the tree-view, click **New** to create a new empty database. Then enter **HR** as the name of the database and click **Create**.

The encoding will be left as **utf8mb4_0900_ai_ci**. UTF-8 is the most commonly used character encoding for content or data.

Proceed to Task B.

Note: Enabling the database statistics here might cause heavy traffic between the web server and the MySQL server.

- [Enable statistics](#)

Console

Exercise 1: Create tables using SQL scripts

In this exercise, you will learn how to execute a script containing the CREATE TABLE commands for all the tables rather than create each table manually by typing the DDL commands in the SQL editor.

1. Download the script file to your computer:
 - [HR_Database_Create_Tables_Script.sql](#)
- Select the HR database. Later click on the Import tab.
- Click on **choose file**. Browse for the file and upload it .
- Later scroll down and click on **Go**.

The screenshot shows the phpMyAdmin web interface. On the left sidebar, the 'HR' database is selected and highlighted with a red box. The main panel is titled 'Importing into the database "HR"'. It features a 'File to import:' section with a 'Choose File' button (also highlighted with a red box) and a text input showing 'HR_Databa...es_Script.sql (Max: 2,048KiB)'. Below this, there's a 'Partial import:' section with a checked checkbox for 'Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. (7)' and a text input for 'Skip this number of queries (for SQL) starting from the first one:' set to '0'. The 'Other options:' section has a checked checkbox for 'Enable foreign key checks'. At the bottom, the 'Format:' section shows a dropdown menu set to 'SQL'. The top navigation bar includes tabs for 'Structure', 'SQL', 'Search', 'Query', 'Export', 'Import', and 'Opera'.

- The script then gets imported successfully.

Exercise 2: Load data into tables

In this exercise, you will learn how data can be loaded into MySQL. You could manually insert each row into the table one by one, but that would take a long time. Instead, MySQL (and almost every other database) allows you to load data from .CSV files.

The steps below explain the process of loading data into the tables you created earlier in exercise 1.

1. Download the 5 .csv files below to your local computer:

- [Departments.csv](#)
- [Employees.csv](#)
- [Jobs.csv](#)
- [Locations.csv](#)
- [JobsHistory.csv](#)

To load each table do the following steps.

- Select each table .
- Click on Import tab.
- Select the **csv** file and click on **Go** to load the csv file.

The screenshot shows the phpMyAdmin web interface. On the left sidebar, the database 'HR' is expanded, and the 'EMPLOYEES' table is selected, highlighted with a red rectangle. The main panel shows the 'Table: EMPLOYEES' view with tabs for 'Browse', 'Structure', 'SQL', 'Search', 'Insert', 'Export', and 'Import'. The 'Import' tab is active, displaying the 'Importing into the table "EMPLOYEES"' screen, also highlighted with a red rectangle. The 'File to import:' section includes a text box for the file name, a 'Choose File' button, and a 'Browse your computer:' button. Below this is a 'Character set of the file:' dropdown menu set to 'utf-8'. The 'Partial import:' section has a checked checkbox for 'Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. (7)'. The 'Skip this number of queries (for SQL) starting from the first one:' field is set to '0'. The 'Other options:' section has a checked checkbox for 'Enable foreign key checks'. The 'Format:' section has a dropdown menu set to 'CSV'. At the bottom, there is a 'Console' tab and a file path 'HR_Database_Crea....sql'.

Browse Structure SQL Search Insert Export Import

Importing into the table "EMPLOYEES"

File to import:

File may be compressed (gzip, bzip2, zip) or uncompressed.
A compressed file's name must end in **.[format].[compression]**. Example: **.sql.zip**

Browse your computer: Employees.csv (Max: 2,048KiB)

You may also drag and drop a file on any page.

Character set of the file:

Partial import:

☒ Allow the interruption of an import in case the script detects it is close to the PHP timeout limit. (7)

Skip this number of queries (for SQL) starting from the first one:

Other options:

☒ Enable foreign key checks

Format:

☒ Console

HR_Database_Crea....sql

Once the tables are loaded , you will get a message that the records are inserted successfully.

Server: MySQL 5.6.23 Database: HR Table: EMPLOYEES
